Product Instrotion

Amazing Speed!

Pad can support 9 printers and connect 3 printers at the same timeOf course, it is far more than that, which printers do you need to add, please send your comments to our e-mail: service@flsun3d.com.

What are the prints of A, B, C, D, E?

	printer type	Chip type	size
а	I3	stm103/stm401	235*235*270
b	I3	stm103	235*235*250
с	I3	2560	300*300*400
d	I3	stm103	245*245*260
e	I3	2560	310*310*400

★ Connect to printer

Please connect your printer as follows, If your motherboard chip model is 2560, you should unplug the printer's screen and skip the process of flashing the printer's firmware.

Download the required firmware from the official website or github and flash it to the printer.

Connect the PAD's **port 1** and the printer, Take out the adapter and power on the PAD.

Click "switch printer" and select your printer.Wait for the PAD to restart.

☆ Select language and time zone

Click "Configuration>Settings" to set the language and time zone of your region.

🖈 Bed Level

After the PAD is connected to the printer, click "Configuration>Bed Level" to level the bed.

Note: This firmware is only applicable to the default leveling method when the printer leaves the factory. If you change the leveling method, Before using the auto-leveling function, you need to modify the configuration file.

🛧 Connect Network

Click"Configuration>Netw ork" to connect to wifi. After the connection is successful, an IP address is generated, and it can be entered into the browser to realize online printing.

Note: The connected wifi and the computer belong to the same local area network; If no IP address appears, please click "System > System Restart."

The camera can be inserted directly into the right port of the PAD (supports UVC protocol).
